Second Tuesday of February	2/11
Second Tuesday of April	4/8
Second Tuesday of August	8/12
Second Tuesday of October	10/14

One Month Prior To Regular Meeting Dates:

President's Message

Hello all,

I hope everyone is doing well.

Great news, we made it through the winter! It sure was a tough one as far as the weather was concerned.

As we battled storm after storm and the frigid temperatures day in, and day out, the NJGWA kept moving forward.

We were able to stay on track with our goals. Please attend our next quarterly meeting and visit our web site for all up-to-date info.

At this time, I would like to ask everyone to call, or write in any suggestions you might have for the NJGWA annual Holiday party, we are throwing around some new ideas and I would appreciate your input.

As I have mentioned before we have a great group of guys and girls in this organization.

It is my hope we can expand this organization, there are a lot of capable individuals out there!

If anyone knows someone that might be interested in joining our organization,

please do not hesitate to contact myself, or one of the officers, directors for some guidance, or even just to answer your questions. We are here to help. It does not matter what position you currently hold, everyone is welcome to attend our quarterly meetings. This is a great way to get started in the NJGWA.

“Let’s keep New Jersey’s most precious resource safe:

New Jersey Ground Water.”

I want to wish everyone a safe and prosperous year!

And thank you all for your support.

*Let’s keep New Jersey’s most precious resource safe:
New Jersey Ground Water.*

NJGWA Local News on the 2014 NGWA Congressional Drive-In

Submitted by Denis Crayon

John Robbins (Vice President of NJGWA) and Denis Crayon (NJGWA Board Member and Director for the NGWA) visited Congressman John Runyan’s staff on April 7th and discussed a few items on our agenda: Geothermal Heat Pump Tax Credits and their

impending sunset. We need to continue the credit to keep the decision a viable one for homeowners to make the investment; HR644, Clean Up of the Delaware River Basin Region, Examples of Managed Aquifer Recharge/Aquifer Storage & Recovery/Sequestration of Carbon

Dioxide in Wells; and Hydrofracking vs. Hydraulic Fracturing.

Denis Crayon also visited Congressman Garrett’s staff on March 18th and discussed the same issues. If anyone else is interested in visiting their Congressman, please give Denis a call: 908-914-8301.

Survey Shows Manufacturers Upbeat About Future

Submitted by Denis Crayon

Manufacturers are showing the highest level of business optimism since late 2012, according to the latest National Association of Manufacturers (NAM)/Industry Week Survey of Manufacturers.

The survey found 86% of respondents were either somewhat or very positive about their company's outlook, the highest sign of manufacturer confidence since the fiscal cliff debate of 2012.

Despite this uptick in optimism, the survey also shows Washington continues to be the major source of the burdens facing manufacturers. The top business challenge, cited by 79% of respondents, was an unfavorable business climate due to taxes, regulations, and government uncertainties, including Washington's inability to solve problems. Rising health care and insurance costs followed closely behind with uncertainties attributed mostly to the implementation of the Affordable Care Act (ACA).

"Manufacturers in America are making more products today and making them

better than ever before, which is why they believe in a bright future of growth and job creation," said NAM Chief Economist Chad Moutray. "However, Washington's burdensome regulatory, tax, and health care policies still loom large in manufacturers' business decisions, particularly for the smallest companies. Manufacturers are prepared to make the investments that will jump-start our economy, but we need Washington to work with us, not against us."

Key survey findings include:

- 86% of respondents were either somewhat or very positive about their company's outlook.
- Manufacturers plan to increase their spending by 1.9% over the next 12 months, up from 1.4% in December.
- 79% cited the unfavorable business climate due to taxes, regulations, and government uncertainties as their top business challenge.
- 77% named rising health care and insurance costs as a primary business challenge, with uncertainties surrounding the ACA.

COMPETITIVE PRICING · QUALITY PRODUCTS · EXCELLENT SERVICE

Legislative Affairs

By Paul J. Bent, Pathways Government Relations

With the first four months of a new legislative cycle coming to a close, all eyes in Trenton are on the Budget.

The Governor gave his Budget Address in February and provided the legislature with a budget for FY 2015 for their consideration. It is now up to the legislature and its budget committees, which will be holding hearings through May, to prepare a budget which must be enacted by midnight of June 30th.

The Governor's Budget is set this year at \$34.5 billion (a 3.5% increase over last year) with pension payments, health care and debt service costs accounting for the increase. Most programs are remaining at level funding, however, some additional monies are going into education, additional tax relief (\$600 million) for businesses, and studies to improve upon health care delivery to make it more efficient.

As for the Division of Water Supply and Geoscience (which oversees well permits and the licensing of well drillers), the Governor is suggesting to keep funding level with FY 2014 adjusted levels of

\$8,006,000 which will fund a staff of approximately 120 (which is down by two from the 2014 figures).

Legislation of interest to the association that had action includes:

- **S-1041 (Gordon) Prohibits** treatment, discharge, disposal, application to roadway, or storage of wastewater, wastewater solids, sludge, drill cuttings or other by-products from natural gas exploration or production using hydraulic fracturing. Currently being monitored, this bill was released by the Senate Environment and Energy Committee and is now awaiting a vote by the full Senate.
- **S-783 (Weinberg) "Unfair Wage Recovery Act"**; provides that unlawful employment practice occurs each time individual is affected. This was passed by the Senate with a vote of 21-13 and is waiting to be received by the Assembly. The association has concerns about how this could impact member companies.

- **S-1038 (Weinberg) "Wage Transparency Act"**; requires reporting of public contractor employment information. Also passed by the Senate, this time with a vote of 21-15, this too is waiting to be received by the Assembly. The association is concerned with the burden this places on member companies.

Several other bills that we are following which deal with "fracking", water, or the operations of a business have been introduced but have not seen any action at this time.

Lastly, we continue to stay engaged with the Department of Environmental Protection in the development of new rules governing well construction and the licensure of well drillers and pump installers. While the Department recently readopted NJAC 7:9D with no changes, we have been told that this was to meet certain deadlines and that they remain committed to pursue changes that have been recommended by the association and the industry at large.

NJ Drilling License exam dates are:

June 11, Oct. 1, and Dec. 10, at 9 AM.

Examinations are given at Rutgers EcoComplex, Bordentown NJ.

EPA Modifies Engine Replacement Rule in Response to NGWA Concerns

Submitted by Denis Crayon

The U.S. Environmental Protection Agency modified its final rules to allow the use of new exempt engines to replace failed engines in water well drilling rigs up to 40 years old.

“The revised rule is a major improvement over EPA’s previous proposal,” said Denis Crayon, National Ground Water Association’s DOT/OSHA Subcommittee chair and director of health and safety at Summit Drilling Co. Inc. in Bridgewater, New Jersey.

The EPA’s initial proposal required a new engine meeting current emission standards be used in the case of engine failure on water well drilling rigs older than 25 years. Depending on the make and model,

there are physical and performance issues in bringing specialized water well drilling equipment up to Tier 4 engine standards. NGWA estimates approximately 30% of water well drilling rigs would have had problems meeting the EPA’s initial proposal.

“Through photos and other communication, NGWA was able to explain the inability, in some cases, to switch out old engines with new Tier 4 engines, and maintain transportation and drilling capability,” shared Fred McAninch, owner of the Rig Doctor in Indianapolis, Indiana, and an NGWA DOT-OSHA Subcommittee member. NGWA also explained to the agency that, unlike some other industries, the use of equipment older

than 25 years is not unusual in the water well industry.

The ability to use new exempt engines as a replacement for failing engines in rigs up to 40 years old allows the water well drilling industry to improve air quality while maintaining business operations. “We are very pleased that the agency worked with NGWA to revise its final rule so as to advance our mutual goals of improving air quality and meeting the nation’s water supply needs,” stated Crayon.

A copy of the final rule is available by going to the Federal Register, Volume 79, page 7077. Industry members are advised to consult with applicable state rules, such as in California, for any additional state level requirements.

New Jersey Ground Water Association

NGWA Releases Updated Position Paper on Hydraulic Fracturing

NGWA recently updated its Hydraulic Fracturing: Meeting the Nation’s Energy Needs While Protecting Groundwater Resources position paper, presenting the official position of the Association, and identifying steps to take to protect the country’s valuable groundwater and

drinking water supplies while addressing the nation’s energy needs through increased oil and gas development using hydraulic fracturing.

Defining the oil and gas hydraulic fracturing process as “a method where fluids are injected under very high pressures to create fractures that extend from a borehole hundreds of feet into surrounding rock formations,” the paper supports additional studies, field-based research, and groundwater monitoring while finding that currently no widespread water quality or quantity issues have been definitively documented that are attributable to the oil and gas hydraulic fracturing process itself. However, there have been several cases of water contamination related to oil and gas activities such as faulty casing installations, unsealed abandoned wells, or poor management of materials/chemicals at the surface. The position paper may be downloaded at www.ngwa.org/Documents/PositionPapers/Hydraulic%20Fracturing%20Meeting%20Energy%20Needs.pdf.
