Second Tuesday of October	10/13

One Month Prior To Regular Meeting Dates:

President's Message

Hello everyone,

I hope you all are well!

It finally looks like winter is loosening its grip on us.

For everyone who worked outside this past winter, Great Job!

The association is in full gear, we have some new board members, and some internal position changes that I believe are good moves for the NJGWA

I want to thank everyone for stepping up to the plate.

I also want to take a minute to thank all the past officers, directors, and committee members for all there assistance in keeping the NJGWA moving forward.

These men, and woman are the backbone of the association.

I feel personally obligated to them for all their charitable work.

We should not have to rely on the same people all the time. This is a large industry, and there are many benefits to joining the NJGWA

*“Let’s keep
New Jersey’s
most precious
resource safe:*

*New Jersey
Ground Water.”*

I try to make it a priority each newsletter to ask for people to join up, take a position on the board, and get more involved.

Feel free to give me a call for more info
973-580-5432

As we move full force through the second quarter of 2015, I wish you all the best! And hope to see you all at the next board meeting.

Remember to visit our web site www.njgwa.org for more info on upcoming events

TNGWA / NJGWA National News 2Q/2015: On the National Front

Submitted by Denis Crayon, CHST Summit Drilling Co. Inc.

-FMCSA Administrator Ferro: ELD Rule in September

-CVSA Annual Roadcheck Event Set for June 2-4

-NGWA Files Comments on Tax Reform to Senate Finance Working Groups

-EPA Hosts Public Meeting on Lead Pipes, Solder, Flux in Preparation for Potential Regulations

Ferro: ELD Rule Soon

FMCSA Administrator Anne Ferro told a group of motor carrier enforcement officials April 23 that a supplemental notice of proposed rulemaking on electronic logging devices (ELDs) should be out by September.

Speaking at a Commercial Vehicle Safety Alliance Meeting in Louisville, Ferro said the proposal will address (1) minimum performance standards for ELDs; (2) mandatory requirements for use of the devices by drivers required to prepare handwritten records of duty status; (3) requirements concerning HOS supporting documents; and (4) measures to ensure that the mandatory use of ELDs will not result in harassment of drivers by motor carriers and enforcement officials.

FMCSA issued a final rule regarding ELDs (then referred to as Electronic On-Board Recorders or EOBRs) in 2010 but it was subsequently vacated by a federal court of appeals and remanded to the agency. The court said FMCSA had failed to comply with a statutory requirement to ensure the devices are not used to "harass" drivers.

New Jersey Ground Water Association

The New Jersey Ground Water Association newsletter is published quarterly.

Deadline for copy and advertising is February 15, April 15, August 15, and October 15, 2015.

Please contact George Strycker for article submission at 732-423-0521

or e-mail Gstrycker@aol.com. For information on placing an advertisement, please contact Barbara Mortillite at e-mail info@njgwa.org

CVSA Annual Roadcheck Event Set for June 2-4

The 28th annual Roadcheck for North American truck and bus safety inspection will run June 2-4 this year, according to the Commercial Vehicle Safety Alliance.

Cargo securement will be the issue that gets emphasized in the United States, Canada and Mexico, CVSA said in an April 13 statement. Securement refers both to loads on flatbed trailers and the contents of dry and refrigerated vans.

CVSA represents truck and bus inspectors working for federal, state and local law enforcement agencies in the three countries. The alliance said it expects 10,000 inspectors to take part in the event this year.

Last year, Roadcheck inspectors examined nearly 73,500 trucks and buses during a similar three-day span.

In recent years the event has had a kickoff at FedEx Field in Landover, Maryland. This year the formal opening will probably be on the West Coast, CVSA Executive Director Stephen Keppler said.

Last year's special emphasis was hazardous materials, or dangerous goods as they are called in Canada.

The primary approach for inspectors is the Level 1 inspection. CVSA described that as a 37-step procedure that looks at drivers and their vehicles.

NGWA Files Comments on Tax Reform to Senate Finance Working Groups

As the Senate Finance Committee continues work on preparing discussion drafts for comprehensive tax reform, NGWA submitted comments to the working groups. With a focus on geothermal heat pump (GHP) markets, NGWA's comments highlighted the importance of continuing residential and commercial tax incentives, in addition to support for five-year

accelerated depreciation and a tax credit for the construction of energy efficient buildings. NGWA argued that the tax incentives play an important role in stimulating the adoption of important renewable technologies like GHPs, whose high initial cost can hinder usage.

NGWA/NJGWA Impact: Tax reform has the potential to impact markets for GHPs by extending or making permanent important tax credits for energy efficiency technologies. Although the Senate is the only chamber working on tax reform so far in 2015, NGWA remains active in ensuring Congress is aware of the need to extend the tax provisions beyond 2016.

EPA Hosts Public Meeting on Lead Pipes, Solder, Flux in Preparation for Potential Regulations

The U.S. EPA hosted a public meeting on April 14 to hear comments on potential revisions to regulations implementing Section 1417 of the Safe Drinking Water Act concerning the prohibition of lead pipes, solder, and flux. The regulations are part of the Safe Drinking Water Act, and include amendments made through the Reduction of Lead in Drinking Water Act of 2011 and the Community Fire Safety Act of 2013. EPA representatives discussed potential changes to labeling and compliance for products sold as lead-free and heard from industry, trade groups, and non-profits in attendance. If EPA decides to proceed with new regulations, a Notice of Proposed Rulemaking would not be issued until 2016.

NGWA/NJGWA Impact: NGWA will monitor the development of the issue, in the event EPA does decide to initiate a rulemaking. A rulemaking could result in new standards or labeling requirements for those who install or manufacture pumps or well system components.

Untreatable Tick-Borne Virus Found in Connecticut (Powassan Virus)

From the CDC, February 9, 2015, Submitted by Denis Crayon

For all, Please pass on to everyone you know, particularly in the Northeast and Great Lakes regions. Copy/paste to your browser (Untreatable tick-borne virus found in Conn., expert says.) or read the articles to the right. We know how Lyme disease travelled and this virus will likely follow suit. The on-line article (April 9, 2015) below is a little confusing stating symptoms but also that no human cases have been reported. The excerpt from the CDC website provides a little more clarity. Disseminating this information is more likely to be helpful than harmful.

Powassan (POW) virus is transmitted to humans by infected ticks.

Approximately 60 cases of POW virus disease were reported in the United States over the past 10 years. Most cases have occurred in the Northeast and Great Lakes region. Signs and symptoms of infection can include fever, headache, vomiting, weakness, confusion, seizures, and memory loss. Long-term neurologic problems may occur. There is no specific treatment, but people with severe POW virus illnesses often need to be hospitalized to receive respiratory support, intravenous fluids, or medications to reduce swelling in the brain.

You can reduce your risk of being infected with POW virus by using tick repellents, wearing long sleeves and pants, avoiding bushy and wooded

areas, and doing thorough tick checks after spending time outdoors. If you think you or a family member may have POW virus disease, it is important to consult your healthcare provider.

At a minimum, please provide employees guidance to:

- check each other/check themselves
- use insect sprays as directed
- wear bright-colored clothing that will allow for sight identification
- tucking of clothing to prevent ticks from making skin contact
- seek medical attention when necessary

Thank you and stay safe,

Together we can build our safety culture,
Denis

Published April 09, 2015

An untreatable, and sometimes fatal tick-borne disease is turning up in parts of southern Connecticut, according to one expert.

Dr. Theodore Andreadis, head of The Connecticut Agricultural Experiment Station, told WCBS 880 that the Powassan virus has symptoms similar to those of Lyme disease, including headache, nausea and fever.

Once contracted, there is no treatment for the virus, and the disease can often be fatal, Andreadis said. While there have been no reported human cases in the areas, Andreadis said that people who venture into wooded areas may encounter deer carrying ticks.

“These ticks will transmit this virus when they feed within a matter of hours, whereas with Lyme disease, for example, ticks generally have to feed up to two days before they’re capable of transmitting it,” Andreadis told WCBS 880.

The virus can often be symptomless before often infecting the nervous system and causing encephalitis and meningitis. Survivors can develop neurological symptoms such as muscle wasting and memory problems, according to the U.S. Centers for Disease Control and Prevention.

The South Atlantic JUBILEE Celebrating 60 Years of Family, Fun and Industry July 25-27, 2015

Myrtle Beach Convention Center, Myrtle Beach, SC

The South Atlantic JUBILEE is the greatest family affair in our industry. From its inception in 1955, the JUBILEE was oriented toward family activities. It continues the legacy of a fun, family event that offers quality continuing education and showcases new technology for professionals in the water well and groundwater related industries.

The JUBILEE is dedicated to the following purposes:

To deal with trade and promotion of the business of water well drilling, the installation of groundwater systems, and related ground water activities, particularly in the South Atlantic area of the United States; and, to produce a trade show for those interested in the water well drilling and ground water related industries;

To provide educational programs designed to improve the professionalism, technical expertise and image of the industry;

To cooperate with manufacturers, suppliers, drillers and installers of related ground water systems and their associates in the industry, including particularly state ground water and water well associations located in the South Atlantic region, in all lawful matters of common interest;

To act as a trade association for the industry in the South Atlantic region, in cooperation with state water well associations, and to perform services which can better be performed as a group than separately; and,

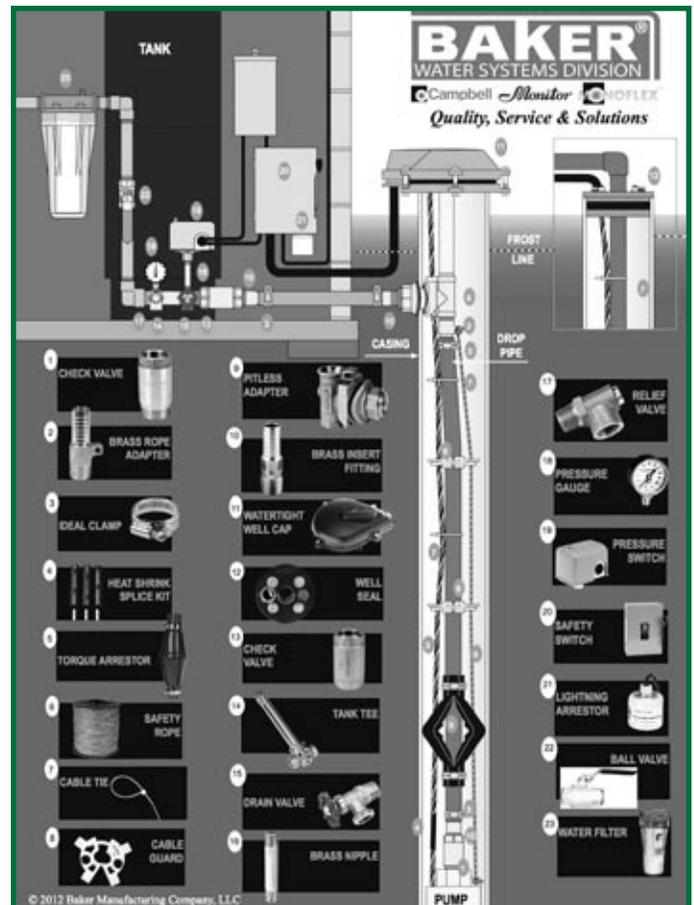

To perform any other lawful acts to help those in the ground water industries to serve the public and promote expansion of the industry.

South Atlantic Jubilee 1955-2014

"It will be a Jubilee." These words were spoken by Russell O. Heater of Raleigh, NC, as he announced his concept for the

event now known throughout the well drilling industry as the South Atlantic Well Drillers JUBILEE. Under Heater's leadership, the first JUBILEE was held in 1955 at Carolina Beach, NC. For years, Heater's vision of a drilling industry event, emphasizing both business and family relationships, has prevailed. The JUBILEE was, and still is, the industry's premier conference and trade show and a "family affair."

"More than any other trade show in the water well industry, the JUBILEE is a people oriented event. Its founders started it to inform, educate, and entertain contractors and their families. In subsequent years hundreds have worked hard for the JUBILEE and thousands more have participated in it. Every one of these people should be recognized for contributing to the JUBILEE'S success." (Kenneth R. Swanson, History of the South Atlantic Well Drillers JUBILEE)
